

App Note: Measuring Single Phase Loads with the WNA-3Y-208 2/23/1999

The WNA-3Y-208 WattNode models are functionally equivalent to the WNA-1P-240 models. The only difference is the presence of measurement circuitry for Phase C. The WNA-3Y-208 models can be used to measure two-wire and three-wire single phase loads, as shown in the following diagrams. In both cases, leave unused voltage inputs disconnected and use shorting wires to jumper the unused current transformer inputs.
